DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 22 and 24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 22, what is meant by the stator attaching to the printed circuit board about the entire leadthrough opening of the rotor? What is considered the opening of the rotor?

Is the opening of the rotor considered the size of the shaft 51? Or the rotor 5?

In claim 24, the lid lacks antecedent basis.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 16, 17, 21-24 and 27-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ogawa et al in view of Numaya et al.

Ogawa et al discloses a shaft drive device having a shaft 70, bearings 14, a pointer 80, a dial 50, a PCB 30, coil 60 and an attachment device wherein the PCB 30 forms a part of a frame of surrounding the shaft 70 (see figure 1).

Art Unit: 2834

However, Ogawa et al does not disclose a leadthrough opening for the PCB.

On the other hand, Numaya et al discloses for the purpose of providing an structure that is able to make electrical connections regardless of whether the circuit board is located at a front or rear surface of the motor, a pointer 20, dial 31, PCB 50 which has a leadthrough opening so the shaft 711 can pass through to the dial 31 (see figures 1, 5).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to design a shaft drive as disclosed by Ogawa and to modify the invention by making a leadthrough opening to the PCB for the purpose of providing an structure that is able to make electrical connections regardless of whether the circuit board is located at a front or rear surface of the motor as disclosed by Numaya et al.

Response to Arguments

5. Applicant's arguments with respect to claims 16-32 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

6. Claims 18-20, 25 and 32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
